

RAHUL R KAMBLE

Software Engineer | Backend, Full-Stack & GenAI

+91-7892849027 | rahul.rrk2307@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Software Engineer with full-stack and backend experience building REST APIs, GenAI/RAG systems, and React-based interfaces in Python, Java, and JavaScript. Proficient across Flask, Django, FastAPI, React, and MySQL, with a strong grounding in DSA, OOP, and SOLID design. Reduced API latency by 12% and resolved 15+ production bugs during a backend internship; independently designed and deployed multiple production-style apps spanning AI/ML, security, and full-stack deployments. Seeking an entry-level Software Engineer, Backend, Full-Stack, or AI/ML role.

TECHNICAL SKILLS

Languages: Python (Advanced), Java, JavaScript, SQL

Frontend: React, HTML, CSS, Responsive UI Development

Backend & APIs: Flask, Django, FastAPI, RESTful API Design, Microservices, CRUD

Databases: MySQL, ChromaDB (Vector DB), Query Optimization, Indexing, Multi-table Joins

AI/ML: LLMs, RAG Pipelines, Sentence Transformers, Scikit-learn, Anomaly Detection

Tools & Practices: Git/GitHub, Postman, VS Code, Linux CLI, Agile/Scrum, SDLC, OOP, SOLID Principles

PROFESSIONAL EXPERIENCE

Software Developer Intern — Edutainer (Remote)

- Architected and shipped 5+ backend features in Python and Java, applying OOP principles to improve system modularity and maintainability.
- Optimized RESTful APIs and SQL queries with targeted indexing, cutting data retrieval latency by 12%.
- Refactored legacy modules following SDLC best practices, resolving 15+ critical bugs and improving application reliability.
- Collaborated with cross-functional teams in an Agile workflow, contributing to bi-weekly sprint planning, code reviews, and Git-based version control.

Software Engineering Virtual Experience — Wells Fargo (Forage)

- Solved enterprise-scale DSA challenges under simulated production constraints, optimizing for memory efficiency and execution speed.
- Delivered clean, production-ready code following SOLID principles and industry-standard design patterns.

PROJECTS

AI Operations Copilot | Python, FastAPI, ChromaDB, Sentence Transformers, RAG, LLMs

- Built a GenAI-powered incident management system that automates root-cause analysis of system logs using LLMs, reducing manual troubleshooting effort.
- Designed a Retrieval-Augmented Generation (RAG) pipeline with ChromaDB and Sentence Transformers, and shipped 5+ FastAPI endpoints for log ingestion, vector storage, and natural-language querying.

AI-Powered Network Threat Detection System | Python, Flask, AI, Cybersecurity

- Built scalable Flask REST APIs with anomaly detection and rate limiting for real-time threat monitoring and alert management; deployed live on Vercel.

Tumor Detection API | Python, Scikit-learn, Flask, REST APIs

- Trained a predictive ML model achieving 92% diagnostic accuracy and exposed inference via Flask REST APIs with structured JSON responses.

REST API Management Service | Python, Flask, MySQL, Postman

- Designed a robust CRUD API service handling multi-table joins in MySQL, with Postman-validated endpoints and structured error handling.

EDUCATION

B.E., Electronics & Communication Engineering (CGPA: 7.1/10) — CMR Institute of Technology, Bangalore
2022 – 2026

CERTIFICATIONS

- Software Developer Intern — Edutainer
- Junior Python Developer — Henry Harvin
- Software Engineering Simulation — Wells Fargo (Forage)
